## Natural History

The Blue-billed Curassow (*Crax alberti*), a Colombian endemic listed as Critically Endangered by the IUCN Red List of Threatened Species, historically ranged throughout Colombia's Northern Caribbean region, but is now restricted to 5% of its former range (Delacour J., D. Amadon, J. del Hoyo, and A. Motis. 2004. Curassows and Related Birds). The wild population has been something of a mystery, and this species was considered by some experts to be extinct (between the years of 1978 to 1988) in the absence of reported sightings (Hoyo, J. del, Family Cracidae in Hoyo, J del, A. Elliott, and J. Sargatal, 1994, Handbook of the Birds of the World, vol. 2). IUCN/The World Conservation Union presently estimates the wild population at 1,000 to 2,499 individuals restricted to several forest fragments. Threats to wild, Blue-billed Curassows include hunting, habitat loss, and capture for the local pet trade, all having a major impact due to the slow reproduction rate of this species.

This species is a priority for the Galliformes TAG, and a close working relationship has been formed with the Colombian Zoo Association (ACOPAZOA). The AZA population of this species has continued to grow. Thank you to all the holders of this species as your dedication to has allowed for the growth of the population. This program won the AZA Sustainability award in 2017. Zoo supported field projects have also increased for this species. If you are interested in supporting these conservation efforts, please contact the SSP for more information.

## Living Population

## Data Field Descriptions

**Studbook ID** – unique number assigned to each individual in the studbook. The studbook number is a permanent number.

**GAN** – Global Accession Number; unifying “key record” under which all animal data for that individual is tracked.

**Birth/Hatch Date** – This field indicates the date of an animal’s birth/hatch. There is a birth/hatch date for every individual. If there is any estimate surrounding this date it will be reflected in this field.

**Sire/Dam** – Numbers reported in this field indicate the Studbook ID of an animal’s parents, when those parents are known. “WILD” indicates that an animal was wild caught and its parents are unknown, wild individuals. “UND” indicates that the parentage of that animal is undefined. “MULTX,” where X is a number, indicates that there are several possible parents, but the specific parent could not be determined. The possible parents within any given MULT are tracked within ZIMS and will be listed when you expand the ‘Parent’ field for that individual.

**Sex** – male, female, undetermined

**Event** – This field documents the movements (i.e., transactions) of individual animals from the first location to the current or last known location. This includes Birth/Hatch, Transfer, Death, Go LTF (Lost to Follow up), Return from LTF, and Release. UNKNOWN indicates that the animal exists or existed, but its location cannot be reliably confirmed.

**Location** – This field indicates the location where the event took place.

**Local ID** – This is the number assigned by the institution in which the event took place. “-” indicates that either an ID was not assigned or no information exists to indicate that an ID was assigned.

**Date** – This field documents the date that any given event occurred. Each event has a date associated with it. If there is any estimate surrounding this date it will be reflected in this field.

**House Name** – This field indicates the name given to the animal at a specific location. Individuals may be given a different house name each time they move to a different location.

**Birth/Hatch Type** – indicates whether the individual was born/hatched in the wild or a captive environment. Undetermined indicates the birth/hatch type is not known.

## **Data Conventions**

There are not set data conventions for this species.

## **AZA Regional Studbook Disclaimer**
