Note: Educational display animals are made 'Itf' which impacts current holding information above.

## Default Definitions & Data Conventions

Studbook ID – unique number assigned to each individual in the studbook. The studbook number is a permanent number. A 'P' in front of the ID number indicates the animal was born at a pen breeding location outside of the six breeding facilities that make up the current Species Survival Plan managed population (CARR, NZP-CRC, PHOENIX, COLO SPRG, TORONTO, LOUISVILL). A 'W' in front of the ID number indicates the animal was captured from a reintroduction site and brought back into captivity for breeding/research efforts. Studbook numbers are currently assigned in chronological order of birth. For each litter, males receive the lower number, then females then unknowns. The highest number of each sex receives the first death date.

Birth Date – This field indicates the date of an animal's birth. There is a birth date for every individual.

Birth Date Est – Indicated if the Birth Date field is an estimate.

None = No estimate, birth confirmed by keeper staff/video

Day = The day is estimated

Month = The month is estimated (typical for wild born animals)

Year = The actual birth date is within the year of the Birth Date field

Sire/Dam – Numbers indicate the Studbook ID of the parents of captive born animals. Cloned individuals have the same number for both sire and dam. Frozen/thawed semen is used for artificial insemination so deceased animals may be producing offspring.

WILD indicates that an animal was wild caught and its parents are unknown wild individuals

UNK indicates that the animal was captive born but identification of the parents is not known

MULT indicates that there are several possible parents in breeding facilities, but the specific one could not be determined. This is rare in the BFF program.

Sex – male, female, unknown/undetermined

Event – This field documents the movements of individual animals from their first location to the current or last known location. This includes birth, transfer, death, go to lost-to-follow up and release. Lost to follow-up (LTF) is used extensively when reintroduction candidates are determined (usually August of each year). LTF allows for the next years breeding recommendations to be made prior to all animals being transferred to release or display.

An annual breeding and transfer planning document is compiled by mid-October.

Location – This field indicates the location where the event took place.

Local ID – Number assigned by each holding institution. CARR uses the Studbook ID for this field.
