Date Field Descriptions

Studbook ID – unique number assigned to each individual in the studbook. The studbook number is a permanent number.

GAN – Global Accession Number; unifying “key record” under which all animal data for that individual is tracked.

Birth/Hatch Date – This field indicates the date of an animal’s birth/hatch. There is a birth/hatch date for every individual. If there is any estimate surrounding this date it will be reflected in this field.

Sire/Dam – Numbers reported in this field indicate the Studbook ID of an animal’s parents, when those parents are known. “WILD” indicates that an animal was wild caught and its parents are unknown, wild individuals. “UND” indicates that the parentage of that animal is undefined. “MULTX,” where X is a number, indicates that there are several possible parents, but the specific parent could not be determined. The possible parents within any given MULT are tracked within ZIMS and will be listed when you expand the ‘Parent’ field for that individual.

Sex – male, female, undetermined

Event – This field documents the movements (i.e. transactions) of individual animals from the first location to the current or last known location. This includes Birth/Hatch, Transfer, Death, **Go LTF** (Lost to Follow up), **Return from LTF**, and **Release**. **UNKNOWN** indicates that the animal exists or existed, but its location cannot be reliably confirmed.

Location – This field indicates the location where the event took place.

Local ID – This is the number assigned by the institution in which the event took place. “-“ indicates that either an ID was not assigned or no information exists to indicate that an ID was assigned.

Date – This field documents the date that any given event occurred. Each event has a date associated with it. If there is any estimate surrounding this date it will be reflected in this field.

Introduction

This is the 15th edition of the AZA Regional Lion Studbook. Previous editions only included animals whose pedigree could be traced to founders. This edition includes all lions held in AZA institutions. Lions of unknown pedigree, referred to as “generic” lions have studbook numbers that begin with a “T”. Lions of known lineage, referred to as “pedigreed” lions have numeric studbook identifiers. Generic lions are excluded from the Lion Species Survival Plan (SSP) breeding population and this designation is used to filter animals for analysis. Pedigreed and generic status refers only to known lineage, not taxonomy.

Taxonomy

In 2018, The U.S. Fish and Wildlife Service (USFWS) adopted the taxonomy proposed in Bertola et al (2015). This publication lists only 2 recognized subspecies of lions: *P. leo leo*, which includes Asiatic lions and African lions from north, central, and western Africa. *P. leo melanochaita* includes lions from southern and eastern Africa. The Lion SSP has always managed lions at the species level but all the founders of the breeding population came from southern or eastern Africa, therefore, they are all *P. leo melanochaita*. USFWS lists P. l. leo as Endangered and P. l. melanochaita as Threatened. **The SSP recommends that all animals of known pedigree be listed as the appropriate subspecies using this new information.** This change will be helpful in reconciling taxonomy in ZIMS (and other software) and will be needed for any future applications for import permits.

Additional information about the population history and husbandry can be found in the Lion Care Manual, available at www.aza.org/animal-care-manuals
