Definitions

Studbook ID – unique number assigned to each individual in the studbook. The studbook number is a permanent number.

GAN – Global Accession Number; unifying “key record” under which all animal data for that individual is tracked.

Birth/Hatch Date – This field indicates the date of an animal’s birth/hatch. There is a birth/hatch date for every individual. If there is any estimate surrounding this date it will be reflected in this field.

Sire/Dam – Numbers reported in this field indicate the Studbook ID of an animal’s parents, when those parents are known. “WILD” indicates that an animal was wild caught and its parents are unknown, wild individuals. “UND” indicates that the parentage of that animal is undefined. “MULTX,” where X is a number, indicates that there are several possible parents, but the specific parent could not be determined. The possible parents within any given MULT are tracked within ZIMS and will be listed when you expand the ‘Parent’ field for that individual.

Sex – male, female, undetermined

Event – This field documents the movements (i.e. transactions) of individual animals from the first location to the current or last known location. This includes Birth/Hatch, Transfer, Death, Go LTF (Lost to Follow up), Return from LTF, and Release. UNKNOWN indicates that the animal exists or existed, but its location cannot be reliably confirmed.

Location – This field indicates the location where the event took place.

Local ID – This is the number assigned by the institution in which the event took place. “-” indicates that either an ID was not assigned or no information exists to indicate that an ID was assigned.

Date – This field documents the date that any given event occurred. Each event has a date associated with it. If there is any estimate surrounding this date it will be reflected in this field.

House Name – This field indicates the name given to the animal at a specific location. Individuals may be given a different house name each time they move to a different location.

Birth/Hatch Type – indicates whether the individual was born/hatched in the wild or a captive environment. Undetermined indicates the birth/hatch type is not known.

Conventions

ZIMS Conversion Conventions:

While data was in Poplink, taxonomy was not tracked. During the conversion of this studbook from Poplink to ZIMS, all animals were assigned the taxonomy *Acinonyx jubatus*. Husbandry records and/or parental taxonomy indicating a subspecies is assumed accurate and accepted.

Unknown Birthdates:

The International Cheetah Studbook is used as a reference for animals with an unknown or uncertain birth date. If the International Cheetah Studbook does not clarify the animal's birthdate, the following convention is used:

- An animal with an unknown birthdate in a given year are given the birthdate of June 1 with a year approximation.
- An animal with an unknown birthdate in a given month are given the birthdate of the 15th with a month approximation.

MULT Parentage:

The following MULT parent assumptions are based on one or more of the following sources: 1) information from the housing institution, 2) a studbook review to determine the animals living at the designated institution at time conception (male) or birth (female), 3) previous studbook keeper analysis, or 4) the international studbook.

MULT Parentage for Poplink

MULT1: 3, 4, 5, 4980 (previous studbook keeper noted: 4 (33%), 5 (33%), 6 (33%))

MULT2: 3, 4, 5, 1980 (previous studbook keeper noted: 4 (50%), 5 (50%))

MULT3: 13, 14

MULT4: 21, 22, 23
