Because the technical information provided in the studbook can easily be misread or misinterpreted unless properly analyzed, AZA and (**St. Louis Zoological Park**) strongly recommend that users of this information consult with the Studbook Keeper in all matters related to data analysis and interpretation.

Data Field Descriptions

Studbook Number – unique, permanent, number assigned to each individual in the studbook.

Birth Date – indicates the date of the animal's birth.

Birth Date Estimate – indicates whether the birth date is an estimate.

None = No estimation

Day = Day is estimated

Month = Month is estimated

Year = the actual birth date is within the year of the Birth Date field.

Sire/Dam -

Numbers indicate the studbook number of the parents of captive born animals.

Wild indicates that animal was wild caught and its parents are unknown wild individuals.

UNK indicates the animal was captive born, but its parents are not known.

MULT indicates there are several possible parents. Possible parents are listed in the parental assumptions note.

Sex – male, female, or unknown.

Event – documents the movements of the animal. This includes birth, Transfer, Death, Lost To Follow up. Unknown indicates the animal exists, but its location cannot be determined.

Location – indicates where the event took place.

Local ID – the number assigned to the individual by the institution where the event took place. Unknown indicates that no ID was assigned, or is not known.

Date – indicates when the event occurred.

Date Estimate – indicates whether the date field is an estimate.

None = No estimation

Day = Day is estimated

Month = Month is estimated

Year = the actual event date is within the year of the Event Date field.

House Name – indicates the name given to an animal at a specific location.

Data Conventions

(Conventions were created by Karan Bauman prior to 2007. No new ones have been added.)

Location is listed as unknown – this is done when either the capture location or less commonly, when captive birth location is unknown.

Date estimates – following the conventions outlined in *Guidelines for Data Entry and Maintenance of North American Regional Studbooks* (distributed by Lincoln Park Zoo) all estimated dates were adjusted to an average date in the middle of the estimated range. Thus, the event should be interpreted as occurring on any date within the estimated period. For example, if an animal was captured in 1975, the date estimate was set for 01 July 1975, estimated to the year.

Removal dates – there have been recommendations to delete removal dates from the studbook for demography purposes. The first edition pre-dates this recommendation and as such removal dates were included in many of the early records. Removal dates are no longer entered into the studbook, but no effort has been made to edit out removal dates from the older records.

Ownership - for the first edition, ownership was only used when an animal was born out on loan. This was included to assist animal record keepers and the studbook keeper in identifying relevant animals linking back to certain institutions. Ownership was removed in subsequent editions.
