Woolham, M. & J. Andrews. 2022. EAZA and AZA Bi-Regional Studbook for Bat-eared Fox (*Otocyon megalotis*). Chicago, IL, USA.

Data Field Description

Studbook ID – unique number assigned to each individual in the studbook. The studbook number is a permanent number.

Birth Date – This field indicates the date of an animal's birth. There is a birth date for every individual. Please check the next column 'Birth Date Est.' to judge the accuracy of that date.

Birth Date Est. – Indicated if the Birth Date field is an estimate.

None = No estimation

Day = The day is estimated

Month = The month is estimated

Year = The actual birth date is within the year of the Birth Date field

Sire/Dam – Numbers indicate the Studbook ID of the parents of the zoo born animals.

WILD indicates that an animal was wild caught and its parents are unknown wild individuals

UNK indicates that the animal was zoo-born but identification of the parents is not known

MULT indicates that there are several possible parents in zoos, but the specific one could not be determined. A parental assumptions note in the Specimen Notes field is included with this parental designation to indicate which animals could be the potential parent.

Sex – male, female, unknown

Event – This field documents the movements of individual animals from the first location to the current or last known location. This includes Birth/Hatch, Transfer, Death, Go LTF (Lost to Follow up), Return from LTF, and Release. UNKNOWN indicates that the animal exists or existed, but its location cannot be reliably confirmed.

Location – This field indicates the location where the event took place.

Local ID – This is the number assigned by the institution in which the event took place. UNKNOWN indicates that either an ID was not assigned or no information exists to indicate that an ID was assigned.

Date – This field documents the date that events occurred. Each event has a date associated with it. Also, check the adjacent column (Date Est.) to determine the accuracy of this date.

Date Est. – Indicates if the adjacent Date field is an estimate. None = No estimation Day = The day is estimated Month = The month is estimated Year = The actual date is within the year of the Event Date field

House Name – This field indicates the name given to the animal at a specific location. Individuals may be given a different house name each time they move to a different location.

Bi-Regional Studbook Management Description:

In 2018, the AZA Canid & Hyaenid Taxon Advisory Group elected a studbook keeper and SSP Coordinator for the Bat-eared fox SSP®. Data for the SSP were kept in a single database held by Mike Woolham, now of Blackpool Zoo in the UK. Data for the studbook contains EAZA and AZA data and is administered by the EAZA executive office. Data are managed and edited by each regional coordinator cooperatively, with each Studbook keeper editing their own regional data only. Access to the studbook can be granted upon request to each studbook keeper.

Living Population

Total = 138 foxes (65.70.3) among 57 facilities

- EAZA = 83 (41.39.3) among 31 facilities
- AZA = 36 (18.18) among 16 facilities
 - North America (Non-AZA) – 4 (2.2) among 2 facilities

****Note** – total number of living does not match the summary of AZA, EAZA and non-AZA North American facilities as there are other non-regional animals tracked in the studbook.
