Natural History

Range:

Red-Fronted Macaws (*Ara rubrogenys*) are native to Bolivia, South America.

Habitat:

Red-Fronted Macaws inhabit the warm dry valleys of Bolivia. Their nests are built in cliffs with several pairs nesting in the same area. Their social structure consists of pairs, family groups or flocks of 10-30 birds. These birds can fly up to 40 mph.

Physical Description:

Red-Fronted Macaws are the “smallest” of the large macaws with an average length of (24 inches) and average wingspan of (32 inches). The normal weight range is between 425-550 grams. Red-Fronted Macaws are mostly green in color with red patches found on their head, shoulders and behind their eyes. Primary feathers are teal; while tail feathers range from green to teal. Males and females are not sexually dimorphic. Juvenile Red-Fronted Macaws will have green heads and begin to show their red coloration on their heads in between six to twelve months of age.

Breeding/Reproduction:

The breeding season of Red-Fronted Macaws is October – March. Pair behavior that can be observed is mutual preening, nibbling at each other’s face, grasping beaks and copulation. Sexual maturity for both sexes is approximately 3-6 years old. However, the average age at first conception is 12-13 years for males and 10-12 years for females.

Red-Fronted macaws will lay 1-3 white eggs. The incubation period is 26-28 days. Chicks will normally fledge around 70-73 days. Both parents will tend to the nest and raise the chicks.

Lifespan/Longevity:

Lifespan in captivity is thought to be of 25-50 years for both males and females.

Diet:

Captive diet consists of commercial parrot maintenance pellets along with a mixture of fruits and vegetables. Limited amounts of seeds/nuts can be supplemented to diet. Wild diet is fruits, seeds, cultivated maize and peanuts.

Husbandry Information:

Red-Fronted Macaws should be secured inside when temperatures are below 35F with available adequate heat sources in their enclosures. These birds can be housed outdoors above freezing as long as the high gets to 45-55F and it is sunny or adequate heat sources are available. Birds should have misters provided when temperatures reach above 95F and there is 80% humidity.

Red-Fronted Macaw Studbook Publication 2019 Red-Fronted Macaws can be housed in same sex groups or family groups. Minimum group size is 2. These birds require year-round enclosure

space of 100-200 square ft. Reasonable temporary/seasonal holding space minimums are 80-100 square ft and 8 feet in height. Environment should allow for complexity with appropriate perching opportunities, fresh bark on limbs is ideal for macaws' feet. Sufficient open space is necessary for birds to promote natural behaviors and flight ability. Mixed species optimal habitat size varies according to species present.

In captivity, wooden nest boxes are recommended (dried plywood pine suggested, no less than 3/8" thick); square, rectangular, and L-shaped all are options. Nest boxes should be 1.5-2' wide and 2' tall, with a "starter" hole (5-7" wide). Hinged doors will allow for easy monitoring and cleaning. A 1" x 1" mesh 2" wide ladder is recommended as a way out of the nest cavity for fledglings. Metal commercial parrot nest boxes can also be utilized. Chicks can remain with parents for 1-3 years but are recommended to stay with parents for at least 1 year for optimal development.

Data Field Definitions

Studbook ID – Unique number assigned to each individual in the studbook. The studbook number is a permanent number.

GAN – Global Accession Number; unifying ‘key record’ under which all animal data for that individual is tracked.

Current Location – Indicates the current location of a living animal or the last known location of a dead/LTF/released individual.

Current Local ID – Indicates the individual’s local ID identifier at its current holding institution if living, or its local ID identifier at its last known holding institution if dead/LTF/released.

Sex – Male, female, undetermined.

Birth/Hatch Date – This field indicates the date of an animal’s birth/hatch. There is a birth/hatch date for every individual. If there is any estimate surrounding this date, it will be reflected in this field.

Current Status – Indicates whether the individual is living, dead, released, undetermined (LTF), etc.

Sire/Dam – Numbers reported in this field indicate the Studbook ID of an animal’s parents, when those parents are known. ‘WILD’ indicates that an animal was wild-caught and its parents are unknown, wild individuals. ‘UND’ indicates that the parentage of that animal is undefined. ‘MULTX,’ where X is a number, indicates that there are several possible parents, but the specific parent could not be determined. The possible parents within any given MULT are tracked within ZIMS and will be listed when you expand the ‘Parent’ field for that individual.

Age – If individual is still alive, this number indicates age of individual at time of data export. If individual is no longer alive/tracked in the SB, indicates age at time of death/LTF/release.

Birth/Hatch Type – Indicates whether the individual was born/hatched in the wild or a captive environment. Undetermined indicates the birth/hatch type is not known.

Event Type – This field documents the movements (i.e. transactions) of individual animals from the first location to the current or last known location. This includes ‘Birth/Hatch,’ ‘Transfer,’ ‘Death,’ ‘Go LTF’ (Lost to Follow up), ‘Return from LTF,’ and ‘Release.’

Date – This field documents the date that any given event occurred. Each event has a date associated with it. If there is any estimate surrounding this date it will be reflected in this field.

Location – This field indicates the location where the event took place. Undetermined indicates that the animal exists or existed, but its location cannot be reliably confirmed.

Local ID – This is the number assigned by the institution in which the event took place. ‘-’ indicates that either an ID was not assigned or no information exists to indicate that an ID was assigned.

House Name – This field indicates the name given to the animal at a specific location. Individuals may be given a different house name each time they move to a different location.
